Understanding DARZALEX®
Interference With Blood Compatibility Testing
DARZALEX® (daratumumab) Results in a False Positive Indirect Coombs Test

DARZALEX® is a human monoclonal antibody for the treatment of multiple myeloma.

DARZALEX® binds to CD38, a protein that is expressed on red blood cells (RBCs).

DARZALEX® binding to RBCs interferes with blood bank compatibility tests, including the antibody screening and crossmatching (both indirect Coombs tests) that are part of a routine pretransfusion workup.
Help Prevent Blood Transfusion Delays

- Blood compatibility testing can still be performed on DARZALEX® (daratumumab)-treated patients.
- Blood products for transfusion can be identified for DARZALEX®-treated patients using protocols available in the literature or by using genotyping.
- To ensure that your patient receives a timely transfusion, type and screen patients prior to starting DARZALEX® and inform the blood bank that they will receive a DARZALEX®-treated sample.

Note: Additional information to share with your blood banks can be found in the Prescribing Information.
DARZALEX® (daratumumab) Interference Is Clinically Manageable

- To date, no clinically significant hemolysis has been observed in patients receiving DARZALEX®, and no transfusion reactions have occurred in patients requiring RBC and whole blood transfusions (data on file)
- DARZALEX® does not interfere with identification of ABO/RhD antigens
- If an emergency transfusion is required, noncrossmatched, ABO/RhD-compatible RBCs can be given, per local blood bank practices
- Once treatment with DARZALEX® is discontinued, pan-agglutination may persist; the duration of this effect varies from patient to patient, but may persist for up to 6 months after the last DARZALEX® infusion

To Ensure Timely Transfusions

REMEMBER

If a patient who received DARZALEX® (daratumumab) requires a transfusion:

- Type and screen patients prior to starting DARZALEX® and inform the blood bank that your patient has been treated with DARZALEX®
- Ensure that your patient’s blood sample is identified as treated with DARZALEX®
- Double-check standing orders for transfusions to determine if your patient received DARZALEX® within the last year
- Provide your patient’s pre-DARZALEX® compatibility profile, if available, to the blood bank
- Ask your patient to tell his/her other HCPs that they have received DARZALEX®, particularly before a transfusion
